

PERMABOND® ET5365

Two-Part Epoxy
Provisional Technical Datasheet

Features & Benefits

- Adhesion to a wide variety of substrates
- Easy to apply
- High shear strength
- Good impact strength
- Very smooth surface finish
- Reliable cure at low temperatures
- WRAS Drinking water approval
- Good resistance to high temperatures

Description

PERMABOND® ET5365 is a two-part, 2:1 mixable epoxy adhesive with good adhesion to a variety of substrates such as wood, metal, ceramics and some plastics and composites. Permabond ET5365 forms tough bonds with excellent shear strength. Due to the nature of the curing agent, ET5365 will cure at lower temperatures than standard epoxy grades.

Physical Properties of Uncured Adhesive

_	ET5365A	ET5365B
Chemical composition	Epoxy Resin	Phenalkamine
Appearance	Cream	Black
Viscosity @ 25°C	2rpm: 500,000- 600,000 mPa.s (cP) 20rpm: 120,000- 160,000 mPa.s (cP)	2rpm: 120,000- 160,000 mPa.s (cP) 20rpm: 25,000- 50,000 mPa.s (cP)
Specific gravity	1.4	1.1

Typical Curing Properties

Permabond ET5365

<i>7</i> .		
Mix ratio	2:1 by volume 100:43 by weight	
Maximum gap fill	2 mm <i>0.08 in</i>	
Usable / pot life 10g mixed @23°C	20 minutes	
Handling time @23°C	2-4 hours	
Working strength	@23°C : 6 hours @60°C: 30 mins	
Full cure	@23°C: 24 hours @60°C: 1 hour	

Typical Performance of Cured Adhesive

Shear strength* (ISO4587) cured 24 hrs @ 23°C	Steel: 10-14 N/mm² (1450-2000 psi) Aluminium: 8-10 N/mm² (1200-1450 psi)
Shear strength*	Steel: 14-16 N/mm² (2000-2300 psi)
(ISO4587)Adhesive	Aluminium: 14-16 N/mm² (2000-2300
cured 1 hour@60°C	psi)

*Strength results will vary depending on the level of surface preparation and gap.

Graph shows typical strength development of bonded components. An increase of 8°C in temperature will halve the cure time. Lower temperatures will result in a slower cure time.

"Hot strength" shear strength tests performed on mild steel. Fully cured specimens conditioned to pull temperature for 30 minutes before testing at temperature. ET5365 can withstand higher temperatures for brief periods (such as for paint baking and wave soldering processes) providing the joint is not unduly stressed. The minimum temperature the cured adhesive can be exposed to is -40°C (-40°F) depending on the materials being bonded.

Additional Information

This product is not recommended for use in contact with strong oxidizing materials.

Information regarding the safe handling of this material may be obtained from the safety data sheet.

Users are reminded that all materials, whether innocuous or not, should be handled in accordance with the principles of good industrial hygiene.

Surface Preparation

Surfaces should be clean, dry and grease-free before applying the adhesive. Use a suitable solvent (such as acetone or isopropanol) for the degreasing of surfaces. Some metals such as aluminium, copper and its alloys will benefit from light abrasion with emery cloth (or similar), to remove the oxide layer.

Directions for Use

- 1. Dual cartridges:
 - a) Insert the cartridge into the application gun and guide the plunger into the cartridge.
 - b) Remove the cartridge cap and dispense material until both sides are flowing.
 - c) Attach the static mixer to the end of the cartridge and begin dispensing the material. Ensure product is fully mixed (grey with no streaks).
- 2. Apply material to one of the substrates.
- Join the parts. Parts must be joined within 20 minutes of mixing the two epoxy components.
- 4. Large quantities and/or higher temperature will decrease the usable life or pot life.
- 5. Apply pressure to the assembly by clamping for 4 hours or until handling strength is obtained.
- 6. Full cure will be obtained after 24 hours at 23°C (73°F).

Storage & Handling

Permabond ET5365

Storage Temperature	5 to 25°C (41 to 77°F)
---------------------	------------------------

Other Products Available

Angerobics

- Thread lockers Thread sealants
- Gasket makers Sealants / retainers

Cyanoacrylates

- Instant adhesives
- For rapid bonding of metals, plastics, rubber and many other materials

Epoxies

- Two-part room temperature cure adhesives
 - Single-part heat cure adhesives
- Modified Technology (MT) flexible grades available

MS-Polymers

Single-part, moisture-curing, flexible sealants

Polyurethanes

■ Two-part room temperature curing adhesives

Toughened Acrylics

Rapid curing, high strength structural adhesives

UV Light Cured Adhesives

- Glass / plastic bonding
 - Optically clear
 - Non-yellowing
